

An open source tool that helps people find work, built in the open by the people it helps. **68,819 stars** and **328 contributors** in under five months, maintained by one person. Sponsorship funds the maintainer and keeps the tool free for candidates, permanently.

WHAT A SPONSOR REACHES

141,435

monthly impressions on the repository front page

where the README renders

82,787

unique people per month on that same page

not sessions, people

\$35

implied CPM at the founding slot price

\$60 per thousand unique people

\$ source: GitHub Traffic API · counted 27 Aug 2026

MOMENTUM, NOT JUST SIZE

SIGNAL	VALUE	WINDOW
New contributors per month	19 → 77 → 97 → 101	May to Aug
Returning contributors	5 → 4 → 25 → 35	May to Aug
Contributor recruitment rate	68.3 / month	since Apr 2026
Stars per day	229 average	last 30 days
Worldwide rank by stars	#272 , up 48 places	last 30 days
Development activity rank	#11 of the 1,000 most starred	30 and 90 day
Unique cloners	16,444	last 14 days
Merged pull requests	1,288, one reviewer	all time

Of the 1,000 most starred repositories on GitHub, only two recruit contributors faster than career-ops. Both are organizations. No individual maintainer does.

WHERE THE AUDIENCE COMES FROM

SOURCE	VIEWS	UNIQUE
GitHub	28,605	12,570
Google	17,677	8,457
LinkedIn	5,632	3,508
X	3,521	2,050
Reddit	2,360	1,211
Bing, Brave, other	1,693	749

THE OFFER

- **Three founding slots.** One per category, exclusive.
- **Placement in the README**, the page measured above.
- **Attribution measured, not estimated.** Your link carries a UTM from day one and you get the real click report every month.
- **Named in the release notes** that reach 256 watchers and the 4,600 person community.

WHAT SPONSORSHIP NEVER BUYS

Candidate data, introductions, ranking, or any influence over what the tool recommends. Candidates never pay and are never the product. That rule is published and predates this offer.

Method. Impressions are the GitHub traffic API counter for the /santifer/career-ops path, which is the repository front page, over 14 days and extended linearly to 30. Unique people are that endpoint's own deduplicated count, not a sum of daily figures. Stars, rank and activity come from the warpchart registry, which snapshots the top 1,000 repositories daily. Contributor cohorts come from a commit census with bots and service accounts excluded. Click-through on README links is not published by GitHub and is therefore not estimated here.

Counted 27 August 2026. Every figure is verifiable against the public GitHub API on request.
