

An open source tool that helps people find work, built in the open by the people it helps. **73,129 stars** and **446 contributors** in under six months. Sponsorship funds the project through its fiscal host, Open Source Collective, and keeps the tool free for candidates, permanently.

WHAT A SPONSOR REACHES

100,440 monthly impressions on the repository front page where the README renders	56,559 unique visitors per month on that same page upper bound, see method	\$50 implied CPM at the founding slot price \$88 per thousand unique visitors
--	---	--

\$ source: GitHub Traffic API · 14-day count, 16–29 Sep 2026, extended to 30 days

MOMENTUM, NOT JUST SIZE

SIGNAL	VALUE	WINDOW
New contributors per month	19 → 77 → 97 → 110 → 100	May to Sep
Returning contributors	5 → 4 → 25 → 36 → 45	May to Sep
Contributor recruitment rate	74.8 / month	since Apr 2026
New stars per day	97 median · 106 mean	16–29 Sep
Worldwide rank by stars	#262 of all repositories	30 Sep
Development activity rank	#17 of the 1,000 most starred	30 Sep
Unique cloners	15,664	16–29 Sep
Merged pull requests	1,822	all time

WHAT SPONSORSHIP NEVER BUYS

Candidate data, introductions, ranking, personal services from any maintainer, or any influence over what the tool recommends. Candidates never pay the project and are never the product. That rule is published and predates this offer.

WHERE THE AUDIENCE COMES FROM

SOURCE	VIEWS	UNIQUE
Google	12,643	7,723
GitHub	10,551	6,481
LinkedIn	4,747	3,473
Reddit	1,540	1,043
X	1,320	886
Threads, Brave, Bing, DuckDuckGo	2,263	1,479

top 10 referrers, whole repo, 16–29 Sep

THE OFFER

- **Three founding slots.** One per category, exclusive, subject to sponsorships already in force.
- **Placement in the README**, the page measured above.
- **A tracked link and a monthly report** of the reach the project measures on its own channels.
- **Named in the release notes** that reach 261 watchers and the 4,900 person community.
- **Invoiced by the fiscal host**, Open Source Collective, and paid to the project's collective.

Method. Impressions are GitHub Traffic API views of the repository front page, where the README renders, counted over 16–29 September 2026 and extended linearly to 30 days. GitHub still reports that page under the current path and the redirected former one (now about 2% of views); both are summed, and because each deduplicates only its own visitors and uniques are scaled the same way, the monthly unique figure is an upper bound. Implied CPM is the unchanged founding slot price divided by the monthly figures. The headline contributor count is GitHub's contributors list (accounts only) less 6 bots and 1 automation account; the repository page shows more because it also counts commit co-authors. Cohorts and the recruitment rate come from the census of distinct commit authors (439) kept by warpchart, which the maintainer also builds, and differ slightly. Stars per day are counted from stargazer timestamps; world rank is from GitHub search; activity rank is warpchart's daily composite across the 1,000 most starred repositories (warpchart.dev/r/career-ops-hq/career-ops). Referrers are GitHub's top 10 for the whole repository. Click-through on README links is not published by GitHub and is not estimated here.

Counted 30 September 2026. Every figure is verifiable against the public GitHub API or warpchart's public API on request.
