

Reach AI-native software engineers at the exact moment they are investing in their careers.

career-ops is an MIT-licensed open source job-search tool. It went from **0 to 63,000+ GitHub stars in under six months**, with zero marketing spend. The audience clones and runs it daily: attention with intent, not an audience that scrolls past.

--	---	---

What your sponsorship funds: maintainer hours, infrastructure and community operations of a free tool used by tens of thousands of engineers. Measurable operational cost, publicly accounted.

Independence policy, published before any money moves: sponsorship never affects which jobs are included, excluded, ordered or displayed. Sponsors receive no candidate data and no roadmap privileges. All sponsored content is labelled. career-ops may decline or end any sponsorship that could undermine community trust. The tool stays MIT and free for candidates, forever.

Comparables: Astro charges Netlify **\$12,500/month** as Official Deployment Partner (public ledger) · Sentry and Mux pay **\$5,000/month** for category partnerships · Tailwind runs ~34 partners at comparable rates.
